## Crossing Loops

### Description:

“Crossing Loops” is one of our most important and unique layouts that show some of capabilities of MeskoToys’ unique curved/curved cross track pieces (22MF6CC). Our distinctive 22MF6CC track piece allows circles to intersect each other. This effect cannot be replicated using “standard” track pieces and is unique to the MeskoToys train track collection. Crossing loops can easily be incorporated into any train track layout.
